TASK FORCE MANAGEMENT SYSTEM (TFMS)	SRS-TFMS-140126 -V1-	A4	1.0	viii

1 SCOPE

The TFMS will provide comprehensive support for the management of academic task forces, including assignment, monitoring, approval workflows, and workload fairness assessment. The system includes:

- a) A centralised database of staff, task forces, and membership information.
- b) Secure login and role-based access control.
- c) Interfaces for System Administrator, HOD/Task Force Owner, PSM/HR Officer, Lecturers, and Faculty Management.
- d) Automated weightage calculation and fairness indicators.
- e) Reporting and analytics features for operational and strategic planning.
- f) The system is limited to the administration of task force activities only. It does not handle teaching workload, research KPI tracking, or performance appraisal—though it may provide summaries useful for those processes.

1.1 Identification

System Number : TFMS-CODEForce
System Name : Taskforce Management System

CSCI Identification Number : Not Applicable
CSCI Title : Not Applicable
CSCI Abbreviation : Not Applicable

1.2 Overview Of the System

Purpose of the TFMS System:

The Taskforce Monitoring System (TFMS) is designed to replace the current manual, spreadsheet-based approach for managing lecturer task force assignments within the Faculty of Artificial Intelligence (FAI). The system aims to address critical operational challenges related to workload transparency, fairness in task distribution, and administrative efficiency as below:

- Role-Based Access Control: Secure authentication and authorization mechanisms for different user roles (System Administrator, HOD, PSM, Lecturer, Faculty Management).
- Data Management Services: Creation, retrieval, update, and deletion operations for staff, task forces, and membership data.

DOCUMENT IDENTIFICATION

SYSTEM NAME	ITEM NUMBER	FORMAT	VERSION	PAGE
TASK FORCE MANAGEMENT SYSTEM (TFMS)	SRS-TFMS-140126-V1-	A4	1.0	1/ 51

- **Business Logic Processing:** Implementation of weightage calculation algorithms, fairness assessment rules, and workflow validation.
- **User Interface Services:** Provision of web-based interfaces tailored to each user role's requirements.
- **Reporting Generation Engine:** Generation of reports, dashboards, and visualizations for operational and strategic purposes.
- **Audit Services:** Comprehensive logging of all system activities for accountability and regulatory compliance.

1.3 Overview Of the Documents

This Software Requirements Specification (SRS) document formally describes the functional, non-functional, and quality requirements for the Taskforce Monitoring System (TFMS). The document serves as the definitive reference for system development, testing, and acceptance.

Analysis of the requirements applying to TFMS relies on an OOAD UML notation using the draw.io. Certain elements resulting from this analysis are presented in this document.

2 APPLICABLE DOCUMENTS

The following documents, for which the exact is indicated, form part of the specification as far as everything specified hereafter is concerned. In the event of a discrepancy between the documents referred to here and the content of this specification, it is the content of the specification, which should be considered to be the background reference.

Copies of specifications, standards, drawings and publications requested by suppliers in contact with the specified supplying functions may be obtained by contacting the contracting agency or directly through the contracting office.

3 ENGINEERING REQUIREMENTS

3.1 CSCI External Interface Requirements

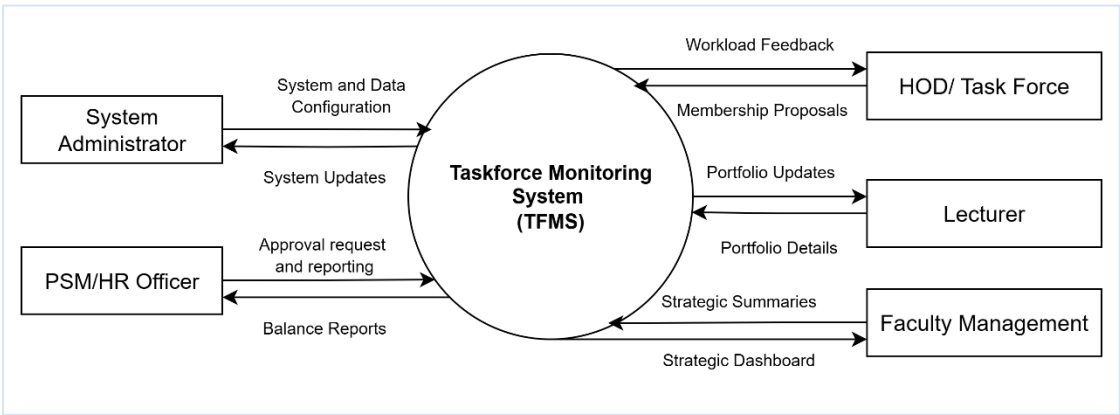

Figure 1: Context Diagram of TFMS

3.1.1 Interface System Administrator

Interface Identification: System Administrator
Interface Type: Person

Description
The System Administrator configures TFMS settings, manages master data, and oversees system operations including audit logs and user accounts.

Association
This actor communicates with the Manage Staff Records, Configure System Parameters, and Access Audit Logs use cases.

3.1.2 Interface Head of Department (HOD)/Task Force Owner

Interface Identification: Head of Department (HOD)/Task Force Owner
Interface Type: Person

Description
The HOD is an actor who manages departmental task force assignments, monitors lecturer workload, and submits proposed lists for approval.

Association

DOCUMENT IDENTIFICATION

TASK FORCE MANAGEMENT SYSTEM (TFMS)	SRS-TFMS-140126-V1-	A4	1.0	4/ 51

This actor communicates with the Assign Task Force Members, Check Workload Fairness, and Submit for Approval use cases.

3.1.3 Interface PSM/HR Officer

Interface Identification: PSM / HR Officer
Interface Type: Person

Description
The PSM is an actor who oversees faculty-wide workload balancing, approves task force submissions, and generates strategic reports.

Association
This actor communicates with the Review Submissions, Adjust Assignments, and Generate Reports use cases.

3.1.4 Interface Lecturer

Interface Identification: Lecturer
Interface Type: Person

Description
The Lecturer is an actor who interacts with the TFMS to view their task force assignments, workload status, and historical participation records.

Association
This actor communicates with the View Personal Dashboard, Download Summary, and Submit Remarks use cases.

3.1.5 Interface Faculty Management

Interface Identification: Faculty Management
Interface Type: Person

Description
Faculty Management actors (e.g., Dean, Deputy Dean) use TFMS to access strategic dashboards and analyze workload distribution across departments.

Association
This actor communicates with the View Executive Dashboard, Drill-Down Analytics, and Export Strategic Reports use cases.

3.2.1 User Authentication & Login (SRS_REQ_100)

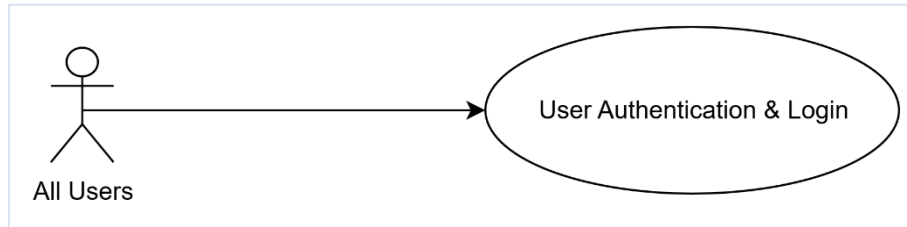

Figure 3: User Authentication & Login Use Case

Brief Description

Users securely log into TFMS. TFMS validates credentials and displays role-specific dashboards. The users include System Administrators, HOD/Task Force Owners, PSM/HR Officers, Lecturers, and Faculty Management.

Characteristics of Activation

The use case is activated when a user navigates to the TFMS login page and attempts to authenticate.

Pre-Condition(s)

1. TFMS operational.
2. Valid user account exists.
3. User account active.

Description

Basic Flow:

1. User navigates to login page. (SRS_REQ_101)
2. TFMS displays login form. (SRS_REQ_102)
3. User enters credentials. (SRS_REQ_103)
4. User clicks "Login" button. If not, [A1: Forgot Password]. (SRS_REQ_104)
5. TFMS validates credentials. If invalid, [E1: Invalid Credentials]. (SRS_REQ_105)
6. TFMS checks if account is locked. If locked, [E2: Account Locked]. (SRS_REQ_106)

8. TFMS creates session and logs login. (SRS_REQ_108)
9. TFMS displays role-appropriate dashboard. (SRS_REQ_109)
10. Use case ends.

Alternative Flow

A1: Forgot Password

1. User clicks "Forgot Password". (SRS_REQ_110)
2. TFMS sends reset link to email. (SRS_REQ_111)
3. User resets password.
4. The use case continues.

A2: First-Time Password Change

1. TFMS detects unmodified initial password. (SRS_REQ_112)
2. TFMS displays password change form. (SRS_REQ_113)
3. User enters new password [R1: Password Policy]. (SRS_REQ_114)
4. TFMS updates password.
5. The use case continues.

Exception Flow

E1: Invalid Credentials

1. Credentials incorrect. (SRS_REQ_115)
2. TFMS increments failed attempt counter. (SRS_REQ_116)
3. After three attempts, account locked [E2: Account Locked]. (SRS_REQ_117)
4. TFMS displays error message "Invalid username or password".
5. The TFMS logs the failed attempt.
6. The use case ends

E2: Account Locked

1. Account locked. (SRS_REQ_118)
2. TFMS displays lock message "Your account is locked. Contact the TFMS Administrator". (SRS_REQ_119)
3. Admin intervention required.
4. The use case ends.

3.4 CSCI Data Element Requirements

This paragraph identifies the interfaces between the capabilities identified above. In this case, this means that we give the main activity, the list of the classes, the received and sent messages of each class according to an object-oriented viewpoint.

3.4.1 Interface Classes

3.4.1.1 User

Class Type	: Entity Class
Responsibilities	: Store and manage user authentication data, roles, and account status for system access control
Received Events	: : login credentials submitted : password reset requested : account unlock requested : role assignment updated : account status changed : logout request
Sent Events	: : authentication result : user roles retrieved : account status retrieved : permission validation result : profile data provided
Attributes	: : StaffID: String : staffName: String : userName: String : password: String : department: String : grade: String : category: String : isActive: Boolean

3.4.1.2 UserRole

Class Type	: Entity Class
Responsibilities	: Define user roles and their permissions in the system
Received Events	: : role assignment requested

3.4.1.7 WeightageRule

Class Type : Entity Class

Responsibilities : Define weightage calculation rules for different task force categories and roles

Received Events :

- : weightage rule requested
- : rule applied to calculation
- : rule updated

Sent Events :

- : weightage value provided
- : rule validation result

Attributes :

- : category: String
- : min_Weightage: Float
- : max_Weightage: Float

3.4.1.8 ApprovalRequest

Class Type : Entity Class

Responsibilities : Store department submission requests for PSM approval workflow

Received Events :

3.4.2 Class Summaries of TFMS

The class overview summarizes within TFMS and their types and primary responsibilities.

Table 1: Class Summaries of TFMS

No	Class	Type	Primary Responsibility	Key Relationships
1.	User	Entity	User authentication and access control	Has UserRole, creates AuditLog
2.	UserRole	Entity	Role assignment and permissions	Links User to Role
3.	Role	Entity	Role definitions	Assigned to User via UserRole
4.	TaskForce	Entity	Task force definition and management	Has TaskForceMembership, belongs to Department
5.	TaskForceMembership	Entity	Member assignment and role tracking	Links User to TaskForce, uses WeightageRule
6.	Department	Entity	Organizational structure	Contains TaskForce, has Users
7.	WeightageRule	Entity	Workload calculation rules	Used by TaskForceMembership
8.	ApprovalRequest	Entity	HOD submission and PSM approval	References TaskForce, processed by TFMS
9.	AuditLog	Entity	Activity tracking and compliance	Logs all User and TFMS actions
10.	SystemConfig	Entity	System configuration parameters	Used by TFMS
11.	Report	Entity	Report generation and export	Generated by TFMS
12.	UI	Boundary	User interface and interaction	Interacts with TFMS, displays to User
13.	TFMS	Control	System orchestration and business logic	Manages all entities, controls workflow

3.6 Sizing and Timing Requirements

Not applicable (*during project 2 the section will be use to list down which requirements require time response*)

3.7 Safety Requirements

3.8 Security Requirements

3.9 Design Constraints

1. Ensuring UML diagrams follow standard UML specifications for clarity and consistency. Team members or tools interpreting UML differently can cause discrepancies.
2. Change UML diagrams as projects evolve. The design must be flexible enough to handle new requirements without costly redesign.
3. Visual language UML must be understood to work well. Diagram misinterpretation might cause implementation errors. Stakeholders without technical knowledge may struggle with UML diagrams.
4. UML tool features and limits might limit system modeling effectiveness. Tools may be difficult to use for some diagram types or not support all UML capabilities.
5. Keeping UML diagrams consistent is crucial. For a unified system view, class, sequence, and use case diagrams must be aligned.
6. As systems become more complex, UML diagrams can become confusing. Maintaining detail and clarity demands balance.
