1 SCOPE

1.1 Identification

System Name : Task Force Monitoring System
 System Abbreviation : TFMS
 System Identification Number : TFMS-CODEForce

1.2 System Overview

1.2.1 Purpose of the System

The Task Force Monitoring System (TFMS) is designed to replace the current manual, spreadsheet-based approach for managing lecturer task force assignments within the Faculty of Artificial Intelligence (FAI). The system aims to address critical operational challenges related to workload transparency, fairness in task distribution, and administrative efficiency, with below capabilities:

- Role-Based Access Control: Secure authentication and authorization mechanisms for different user roles (System Administrator, HOD, PSM, Lecturer, Faculty Management).
- Data Management Services: Creation, retrieval, update, and deletion operations for staff, task forces, and membership data.
- Business Logic Processing: Implementation of weightage calculation algorithms, fairness assessment rules, and workflow validation.
- User Interface Services: Provision of web-based interfaces tailored to each user role's requirements.
- Reporting Generation Engine: Generation of reports, dashboards, and visualizations for operational and strategic purposes.
- Audit Services: Comprehensive logging of all system activities for accountability and regulatory compliance.

1.2.2 System Architecture

The TFMS is implemented as a modern web-based system designed to manage staff, task forces, and workflow assignments efficiently. Its architecture includes the following key components and features:

DOCUMENT IDENTIFICATION

SYSTEM NAME	ITEM NUMBER	FORMAT	REVISION	PAGE
Task Force Management System (TFMS)	STR-TFMS-190126-V1-	A4	1.0	1 / 25

- **Role-Based Access Control (RBAC):** The system enforces **role-specific permissions** for multiple user types including Admin, HOD, PSM, and Lecturer, ensuring that each user can access only authorized functionality.
- **Real-Time Data Management:** TFMS supports **dynamic updates of task force assignments, workloads, and user activities**, enabling real-time visibility and reporting across departments.
- **Report Generation and Export:** Users with appropriate permissions can generate **custom reports** for assignments, workloads, and executive summaries, which can be exported in common formats such as **PDF or Excel**.
- **Audit Logging and Traceability:** All critical actions are logged automatically to support **traceability, and accountability**, which is essential for workflow approval and reporting.
- **Web-Based Client-Server Architecture:** TFMS operates on a **browser-based front-end** interacting with a secure back-end server and database, ensuring scalability, accessibility, and maintainability.

1.3 Overview of the Documents

The Software Test Report (STR) contains the test cases and test procedures necessary to perform formal qualification testing of TFMS.

Section 1	Describes the scope, identification, system overview and document overview.
Section 2	Referenced documents, government documents and non-government documents.
Section 3	Describes the test summary including test environment and test results summary.
Section 4	Describes the detailed test results for each Test Item identified in TFMS.
Annex 1	Contains testing results.

2 REFERENCED DOCUMENTS

The following documents, for which the exact is indicated, form part of the specification as far as everything specified hereafter is concerned. In the event of a discrepancy between the documents referred to here and the content of this specification, it is the content of the specification, which should be considered to be the background reference.

Copies of specifications, standards, drawings and publications requested by suppliers in contact with the specified supplying functions may be obtained by contacting the contracting agency or directly through the contracting office.

2.1 Government Documents

- [1] DoD-Std-2167A Defense System Software Development
- [2] DoD-Std-2168 Defense System Software Quality Program
- [3] MIL-Std-1521B Technical Reviews and Audits

2.1 Non-Government Documents

This section consists of the contractual documents and non-contractual documents.

2.3 Contractual documents

- [4] URS (MSE-FT31-2025) User Requirements Specification
- [5] SDP-TFMS-261225-V1 Software Development Plan
- [6] SRS-TFMS-140126-V1 Software Requirements Specification
- [7] SDD-TFMS-190126-V1 Software Design Document
- [8] STD-TFMS-190126-V1 Software Test Description

Glossary:

Term	Definition
Defect	A flaw or error in the software code, design, or requirements that causes the system to produce incorrect or unintended results
Functional Test	Functional testing is to verify the functionalities of the application modules and the system as stated in the requirements. Individual features within the specific system modules will be verified.
Incident	Any unexpected event observed during testing that requires investigation, regardless of whether it is ultimately traced to a defect, environment issue, or tester error
Non-Functional Test	Non-functional testing is the testing of a system for its non-functional requirements. Objective of the non-functional testing is to cover the quality attributes of the component or system such as performance test.
Performance Test	A test type to determine the performance efficiency of a component or system.
Regression Test	Regression testing is conducted after the first iteration of testing has been completed. Objective of regression testing is to find new defects in existing functionalities of a system after changes such as enhancements, patches or configuration changes have been made to the system.
Security Test	A test approach in which attacks are simulated and reactions are analyzed to determine the vulnerabilities of a component or system.
Test Case	A set of preconditions, inputs, actions (where applicable), expected results and postconditions, developed based on test conditions.
Test Condition	A testable aspect of a component or system that is intended to be tested.
Test Coverage	The degree to which specified coverage items are exercised by a test suite, expressed as a percentage.

DOCUMENT IDENTIFICATION

SYSTEM NAME	ITEM NUMBER	FORMAT	REVISION	PAGE
Task Force Management System (TFMS)	STR-TFMS-190126-V1-	A4	1.0	4 / 25

Term	Definition
Test Item	A part of a test object used in the test process.
Test Model	A model describing testware that is used for testing a component or a system under test.
Test Procedure	A sequence of test cases in execution order and any associated actions that may be required to set up the initial preconditions and any wrap-up activities after execution.

3 TEST SUMMARY

3.1 Test Overview

Purpose:

The purpose of this **System Test Report (STR)** is to document and define the testing activities conducted for the **Task Force Management System (TFMS)**, which replaces manual, spreadsheet-based processes by automating lecturer task force assignments, performing workload fairness checks, and generating administrative and executive reports within the **Faculty of Artificial Intelligence (FAI)**. The STR captures test objectives, procedures, results, and traceability to ensure that the system meets its functional and non-functional requirements.

Scope:

Testing scope is based on the Product Quality Model in ISO/IEC 25010:2023 including functional testing and non-functional testing such as performance test and security testing for identified test items. It excludes any integration with external finance or student-records systems.

Test Model versus Test Item:

Table 3.1 summarizes the relationship between the defined Test Model and the corresponding Test Items.

Table 3.1: Test Model versus Test Item

Test Model	Test Item Name
Authentication & Access Control	User Authentication & Login
	Password Reset
Staff and Task Force Management	Staff Management
	Task Force Management
	System Configuration
Assignment & Workload Management	Task Force Assignment (HOD)
Approval Workflow	Task Force Approval (PSM)
Lecturer Portfolio	Lecturer Portfolio
Executive Reporting	Executive Reports
Audit & Notification	Audit & Notification

DOCUMENT IDENTIFICATION

SYSTEM NAME	ITEM NUMBER	FORMAT	REVISION	PAGE
Task Force Management System (TFMS)	STR-TFMS-190126-V1-	A4	1.0	6 / 25

Test Execution Period:

The testing period is scheduled from 1 January to 31 January 2026. The User Quality Testing (UQT) has been conducted on 21st January 2026.

Test Environment:

Table 3.2 summarizes the configuration of the test environment. It outlines the hardware, software, test data and supporting tools required to execute the defined test items, ensuring consistency, reproducibility, and alignment with the Test Procedure Specification.

Table 3.2: Test Environment Configuration

Description\ Environment	Development	Staging	Production
Platform	Local development machines	PythonAnywhere (Free Tier)	To be determined
Tools	Git, Visual Studio Code	PythonAnywhere Console, Manual Testing (Browser)	
Operating System	macOS	Linux (Ubuntu - PythonAnywhere)	
Database	SQLite		
Backend	Django 4.2.27, Python 3.10+		
Frontend	Django Templates		

Component	Specification	Version	Notes
Test Framework			
Programming Language	Python	Python 3.10+	N/A
Browser	Chrome, Edge, Firefox	Latest	N/A
Test Server			
Server URL	PythonAnywhere (Free Tier)	Free web hosting	Staging server

Test Data			
Test Users	Custom test data	N/A	Admin, HOD, Management, Lecturer
Test Database	Custom test data	N/A	N/A

3.2 Test Results Summary by Test Item

Table 3.3 provides an overview of test results, showing that all test cases for Test Item.

Table 3.3: Test Results Summary

Test Item	Number of Test Cases	Tests Executed	Pass	Fail	KIV	Pass Rate
User Authentication and Login	13	13	13	0	0	100%
Password Reset	3	3	3	0	0	100%
Staff Management	7	7	7	0	0	100%
Task Force Management	3	2	2	0	0	100%
System Configuration	1	1	1	0	0	100%
Task Force Assignment (HOD)	13	13	13	0	0	100%
Task Force Approval (PSM)	10	8	8	0	0	100%
Lecturer Portfolio	9	8	8	0	0	100%
Executive Reports	6	5	5	0	0	100%
Audit and Notification	4	4	4	0	0	100%
TOTAL	69	64	64	0	0	100%

DOCUMENT IDENTIFICATION

SYSTEM NAME	ITEM NUMBER	FORMAT	REVISION	PAGE
Task Force Management System (TFMS)	STR-TFMS-190126-V1-	A4	1.0	8 / 25

There are 5 test cases are not executed due to several reason such moved to related Test Procedure due to test cases by roles and has been covered another test cases. **Refer to Section 4 for comprehensive details on test execution. The test cases associated with each test item are organized sequentially in accordance with the Test Procedure Specification.**

The execution times presented in Table 3.4 are approximate values derived from manual observation. Since automated performance measurement tools were not utilized, these figures should be treated as indicative only. Final verification of execution times must be conducted during dedicated performance testing using appropriate tools.

Table 3.4: Test Execution Time Summary

Test Item	Execution Time (s)	Status
User Authentication and Login	~2s	Completed
Password Reset	~2s	Completed
Staff Management	~2s	Completed
Task Force Management	~2s	Completed
System Configuration	~2s – 3s	Completed
Task Force Assignment (HOD)	~2s – 4s	Completed
Task Force Approval (PSM)	~2s – 3s	Completed
Lecturer Portfolio	~1s - 2s	Completed
Executive Reports	~1s - 2s	Completed
Audit and Notification	~2s	Completed

3.3 Deviations from testing plan

1. Security Testing:

Security testing was not executed within this cycle due to constraints in scope and resource allocation.

DOCUMENT IDENTIFICATION

SYSTEM NAME	ITEM NUMBER	FORMAT	REVISION	PAGE
Task Force Management System (TFMS)	STR-TFMS-190126-V1-	A4	1.0	9 / 25

2. Performance Testing:

Performance testing was deferred because the current release does not involve high-volume or mission-critical workloads. The system is intended for functional validation of interoperability rather than production deployment at scale

This section may also reference the section on residual risks for any risks that the deviations pose to the testing and their relevant risk treatments.

3.4 Test completion evaluation

Table 3.4 describes the testing met the specified test completion criteria This section may also reference the section on residual risks for any risks that any incomplete completion criteria pose and their corresponding risk treatments.

Table 3.5: Test Completion Evaluation

Evaluation Criteria	Actual
Functional test: >95 % of functional requirements tested >95 % requirement-coverage for critical modules. >95% overall pass with no high-severity test cases	100 % of functional requirements tested, 100 % of requirement-coverage for critical modules, 100% overall pass with no high-severity test cases
Performance test: 90 percentile response times remain at or below the threshold for 50 virtual users ✓ Time ≤ 2 sec ✓ 5 sec <Time and <10 sec ✓ Time>10 sec Server Utilization < 80% Failure rate < 2%	To be determined
A security test: no critical or high-severity findings remain unresolved.	To be determined

3.5 Factors that blocked progress

Table 3.5 describes those factors that impeded progress and the corresponding solutions that were implemented to remove them.

DOCUMENT IDENTIFICATION

SYSTEM NAME	ITEM NUMBER	FORMAT	REVISION	PAGE
Task Force Management System (TFMS)	STR-TFMS-190126-V1-	A4	1.0	10 / 25

Table 3.6: Factors that Blocked Progress

No.	Factor Impeding Progress	Description	Solution Implemented
1.	Email for testing data	The system enforces a strict one-to-one mapping between user accounts and email addresses, which prevented reuse of real emails during test execution.	Adopted temporary email addresses (temp-email.org) to generate disposable accounts, enabling flexible test data creation without violating system constraints.

3.6 Test measures

Table 3.7 to 3.10 presents the collated test measures including test cases, defects, incidents and test coverage.

Table 3.7: Test Cases

Metric	Number	Actual	Status
Test case planned	69	64	Completed
Test case executed	64	64	Completed
Test case pass	64	64	Completed
Test case failed	0	0	Completed

Table 3.8: Test Defects

Metrics	Count	Severity	Status
Total Defects	N/A	N/A	N/A

Table 3.9: Test Incidents

Incident Type	Count	Description
N/A	N/A	N/A
N/A	N/A	N/A

DOCUMENT IDENTIFICATION

SYSTEM NAME	ITEM NUMBER	FORMAT	REVISION	PAGE
Task Force Management System (TFMS)	STR-TFMS-190126-V1-	A4	1.0	11 / 25

Table 3.10: Test Coverage

Coverage Type	Count	Description
Requirement coverage	65	100 % of requirement-coverage for critical modules.
Branch coverage	N/A	N/A
Risk-based coverage	N/A	N/A

3.7 Residual risks

Table 3.11 lists the risks that are untreated at the end of the testing; this may be risks that have not been fully treated by the testing and /or any new risks identified as a result of the final monitoring and closure of the test.

Table 3.11: Risk Residual

Risk ID	Description	Impact	Recommended Action
RT01	Security Vulnerabilities/Breach	Potential vulnerabilities may remain untested at the application level.	Regular software updates, incident response plan, backup and recovery, secure communication channels
RT06	Host Resources (CPU, Memory) does not Meet Performance Requirement	System behaviors under peak load remains unverified	This risk is mitigated by applying conservative capacity planning assumptions, monitoring system resource utilisation during pilot runs, and committing to execute performance testing prior to full production rollout
RT08	PythonAnywhere Free Tier response time variability (delays >3s during certain transactions such as	misrepresents expected system behaviour	Document limitation, average results across repeated runs and plan migration to paid/cloud environment for stable

3.8 Test deliverables

Lists all the test deliverables produced as a result of the testing and their location.

- Specification Test Description
- Test Execution: Test Procedure/Test Script, Test Data.
- Test Data Sets: Custom Test Data for test scenarios.
- Traceability Matrix: Mapping of SRS requirements to test cases.
- Defect Reports: Test Result and Status.
- Test Report:
 - ✓ Functional Test Result (Test Summary by Test Item)
 - ✓ Performance Test Result (not applicable yet)
 - ✓ Security Test Result (not applicable yet)

3.9 Reusable test assets

Table 3.12 lists all the reusable test assets and their location.

Table 3.12: Reusable Test Assets

Test Asset	Description	Repository Path / Location
Test Procedure Specifications	A sequence of test cases in execution order and any associated actions that may be required to set up the initial preconditions and any wrap-up activities after execution.	OneDrive\SE Project\TFMS\Documentation\Testing
Test Case Specifications	A set of preconditions, inputs, actions (where applicable), expected results and postconditions, developed based on test conditions.	OneDrive\SE Project\TFMS\Documentation\Testing
Test Data Sets	SQL scripts and CSV files for seeding test scenarios	OneDrive\SE Project\TFMS\Documentation\Testing

DOCUMENT IDENTIFICATION

SYSTEM NAME	ITEM NUMBER	FORMAT	REVISION	PAGE
Task Force Management System (TFMS)	STR-TFMS-190126-V1-	A4	1.0	13 / 25

Test Asset	Description	Repository Path / Location
Requirement Traceability Matrix	Mapping of SRS requirements to test cases and defects	OneDrive\SE Project\TFMS\Documentation\Testing
Selenium WebDriver Automation Suite	UI automation scripts for regression and smoke testing	Not applicable
Apache JMeter Performance Scripts	Load-test scenarios and benchmarks	Not applicable
OWASP ZAP Security Scan Config	Configuration for automated vulnerability scanning	Not applicable

3.10 Lessons learned

Describes the results of the lessons learned meeting.

- Conduct usability test sessions to enable early remediation of prominent UI/UX issues and minimize the risk of critical problems later.
- Enhance regression test suite to include edge-case scenarios.
- Schedule quarterly security re-scans to detect emerging vulnerabilities.
- Apply appropriate testing techniques to detect defects effectively.

Tester's Name		Date Tested	19-Jan-2026	Test Case (Pass/Fail/Not Executed)	
---------------	--	-------------	-------------	------------------------------------	--

S #	Preconditions:
1	TFMS application is accessible via network
2	Browser is supported and open https://junaed.pythonanywhere.com/

S #	Test Data
1	None required (page access only)
2	

<u>Test Scenario</u>	User accesses TFMS login page and the login form is displayed correctly
----------------------	---

Step #	Step Details	Expected Results	Actual Results	Pass / Fail / Not executed / Suspended
1	Opens the TFMS URL in a supported web browser	TFMS web page successfully opened	As Expected,	Pass
2	Verify the login page.	Login form appears with: • Username input field • Password input field • "LOG IN" button	As Expected,	Pass

ANNEX 1: Test Result
Appendix 1: Authentication and Access Control

		• “Lost Password?” link		
--	--	---	--	--

<u>PostConditions</u>	User remains on the login page No session is created
-----------------------	---

---------------	--	-------------	-------------	------------------------------------	--

S #	Preconditions:
1	The HOD is logged in and ready to add a new member to a task force or change a member's role.
2	There is an staff in the system whose current total workload is close to or has reached the upper limit of the "balanced" state.
3	The system has correctly defined the "overload" threshold.

S #	Test Data
1	Target task force name: T-FL
2	Names of employees who are nearing or at full load: Junaed Lecturer
3	Attempt to assign a new role to Overloaded Junaed Lecturer.

<u>Test Scenario</u>	TFMS warns HOD if any member is overloaded.
----------------------	---

Step #	Step Details	Expected Results	Actual Results	Pass / Fail / Not executed / Suspended
1	Log in to system and access management	System loads member management interface.	As Expected,	Pass

ANNEX 1: Test Result

Appendix 3: Assignment and Workload Management

	interface of target task force.			
2	Perform an operation that may cause high-load staff A to become overloaded, such as: Attempt to add high-load staff A to this task force and assign the role.	The system displays a clear warning message to the HOD, mentioning the "Overload" risk	As Expected,	Pass
3	Observe the system interface during the confirmation steps before/after performing the operation.	The system will pop up an 'Overload Warning' dialog, and the HOD will confirm whether to continue submitting.	As Expected,	Pass

PostConditions

The HOD receives the warning and can decide to continue or cancel the operation.
If the HOD chooses to continue, the system will record this decision.

-----------------	------------------------

Tester's Name		Date Tested	19-Jan-2026	Test Case (Pass/Fail/Not Executed)	
---------------	--	-------------	-------------	------------------------------------	--

S #	Preconditions:
1	HOD is performing an operation that triggers an overload warning (as described in TC-08-07).
2	The system is configured to allow coverage and has appropriate accountability mechanisms.

S #	Test Data
1	The same scenario as TC-08-07, i.e., attempting to add a high-load staff "Junaed Lecturer" as a task force lecturer a warning.

Test Scenario	HOD Overload Warning Coverage.
---------------	--------------------------------

Step #	Step Details	Expected Results	Actual Results	Pass / Fail / Not executed / Suspended
1	Log in to system and attempt to assign high-load staff as task force lecturer.	No validation error message is displayed	As Expected,	Pass
2	When the warning message appears, click "SUBMIT FOR APPROVAL" Button.	The system pops up an 'Overload Warning' window, alerting and requesting input for Justification / Remarks.	As Expected,	Pass

ANNEX 1: Test Result

Appendix 3: Assignment and Workload Management

3	Enter the reason and click the "CONFIRM & SUBMIT" button.	The system continues to perform the originally requested operation (e.g., a member is added).	As Expected,	Pass
4	Complete the operation.	The system submits for PSM approval.	As Expected,	Pass

PostConditions

The operation was completed despite the initial warning.
The audit trail records the overwrite operation and its reason.
